

Cyclistic Case Study: Member vs Casual Rider Analysis

Visualizing rider behavior to guide membership strategy

This analysis compares annual members and casual riders to identify opportunities for converting casual riders into members.

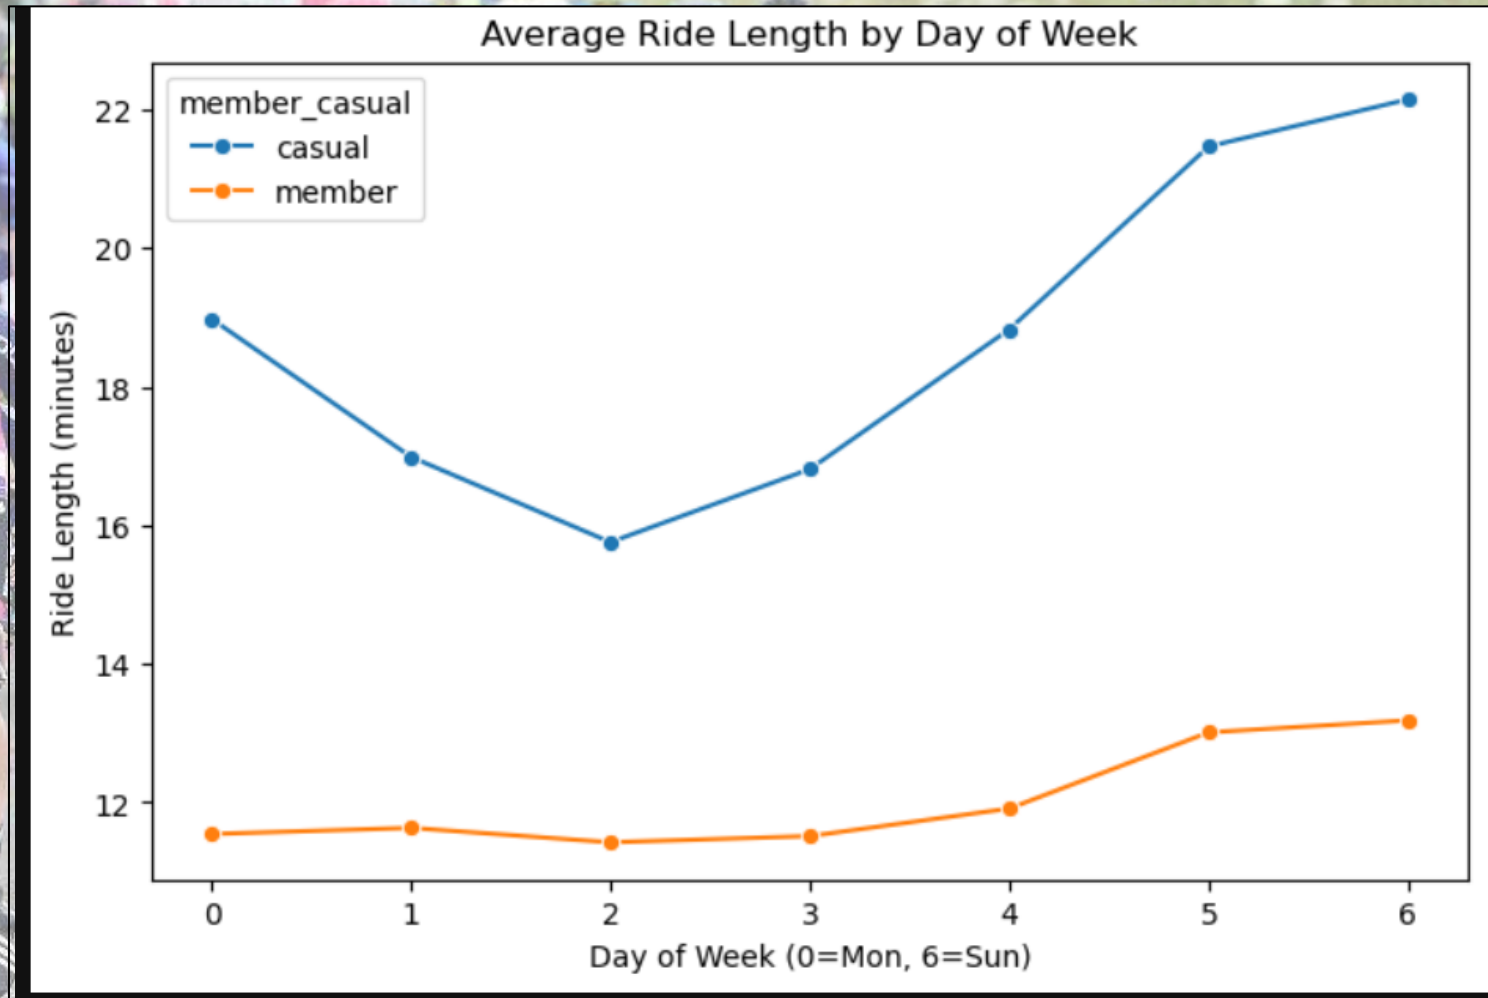

Ride Length Comparison (Members vs Casual)

- **Casual** riders average **20–25 minutes** per trip.
- **Members** average **12–14 minutes** per trip.
- Indicates leisure vs commuting usage.

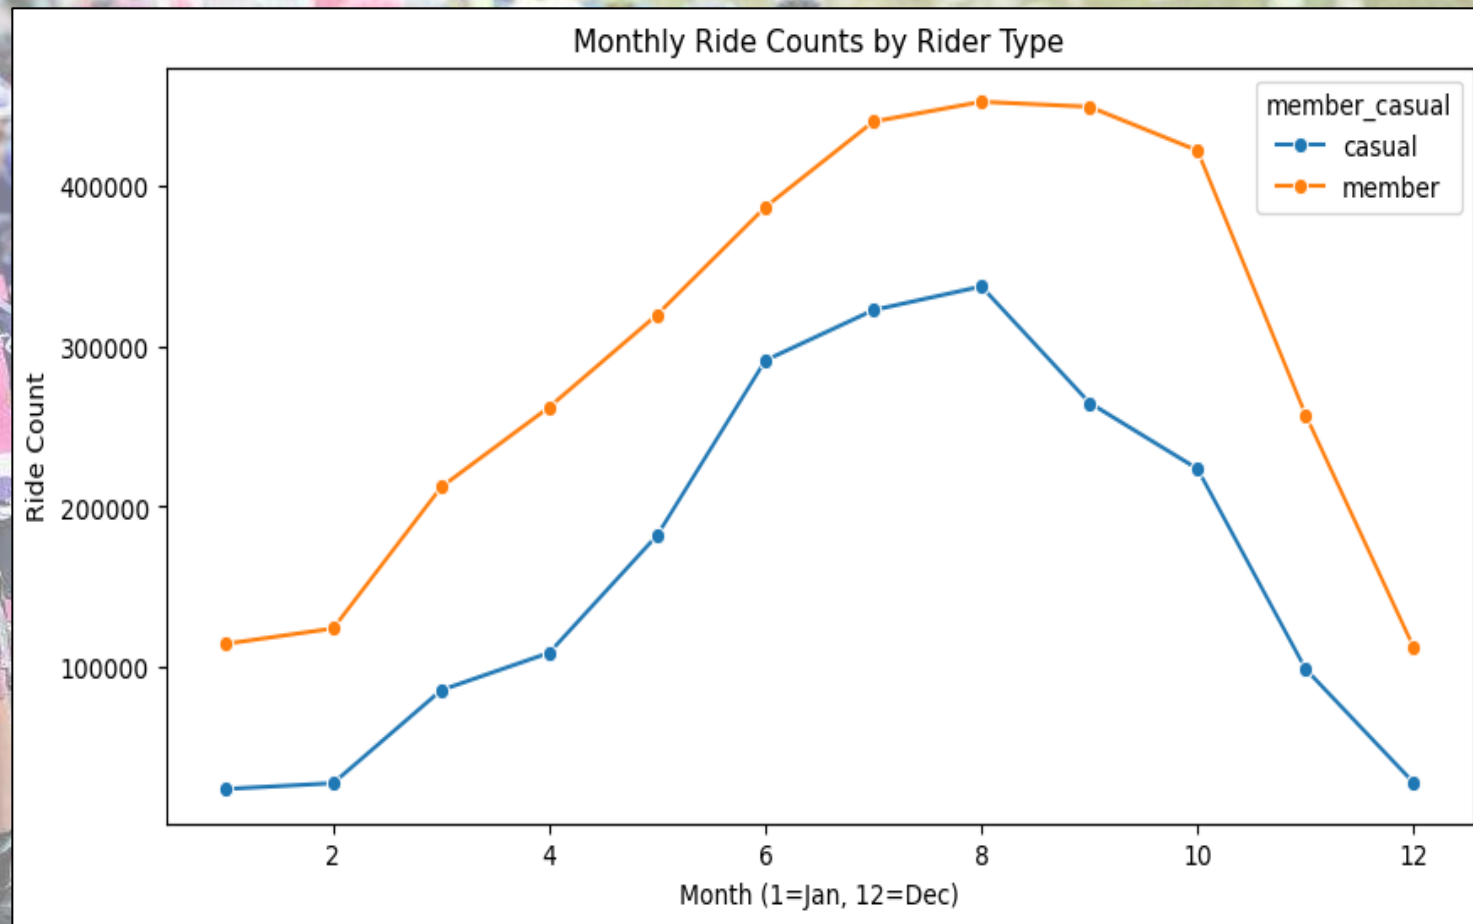

Ride Frequency by Day of Week

- Members ride more during weekdays (commuting).
- Casual riders peak on weekends (recreation/tourism).

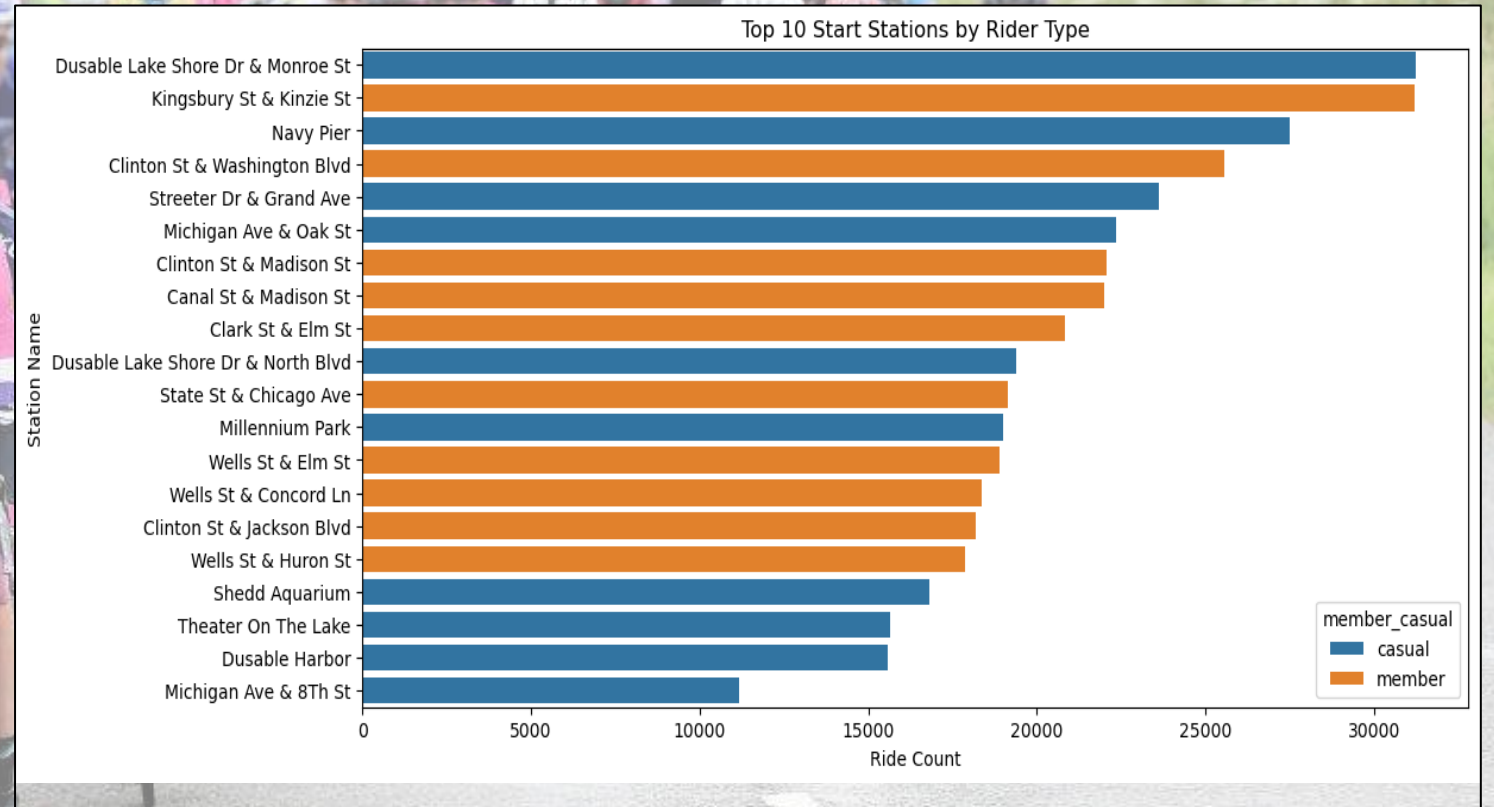

Seasonal Trends

- Casual rider activity spikes in summer months (June–August).
- Members maintain steady usage year-round.

Top Start Stations

- **Casual riders favor tourist areas and parks.**
- **Members prefer business districts and residential neighborhoods.**

Key Insights

- Casual riders = leisure/tourism → longer rides, weekend peaks, seasonal spikes.
- Members = commuters → shorter rides, weekday peaks, steady year-round usage.
- Opportunity: Convert casual riders by emphasizing **cost savings, convenience, and commuter benefits**
